DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-15, drawn to a heat insulating and sound insulating duct wall structure.

Group II, claim(s) 16, drawn to a component of a duct wall.

Group III, claim(s) 17, drawn to an external heat insulating structure disposed on a duct wall structure.

2. The inventions listed as Groups I, II, and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

3. Group II is a component of a duct wall structure. Group II is similar to Group I in that it claims an inner plate, an outer plate, a heat insulating member and a vibration deadening washer. However, Group II claims a more detailed Vibration deadening washer, composed of a tray-shaped pan, and fails to disclose the intermediate members, and their relation to the other structural elements, as claimed in Group I. Therefore, the Groups are distinct I that the component of Group II is not necessarily disposed on the structure of Group I.

4. Group III is an external heat insulating structure that can be disposed on the outer surface of a duct wall structure. However, like Group II, the duct wall structure described in Group II is not necessarily the same as that of Group I. Group III fails to teach the structural design elements of the duct wall as presented in Group I.

5. Further, Group II and Group III are related as components disclose as usable in a single combination, more specifically disposed on a duct wall structure. These components however, are distinct from each other since they are shown to be separately usable. In the instant case, Groups II and III have separate utilities, operate separate of each other, and are not required in conjunction for the duct wall structure to function. Also, as stated above, the duct wall structure disclosed in Groups II and III are not necessarily the same.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
